I began using satellite radio because I found that broadcast radio no longer met my needs. It has become nothing but commercials and shouting DJ's. I strongly ask that you reject NBA's petition 04-160. Having "instant access" to vital traffic and weather information without having to wait and wait for commercials to end to get a partial report at best is one of the many benefits satellite radio has brought. It not only enhances safety but provides a service that broadcast radio cannot offer.

Broadcast radio is no longer meeting the needs of the public and instead of changing to give us what we need, they are asking you to regulate them to success. In the free enterprise arena, the consumer should be the one to decide who is serving the public.
